Last Updated Tuesday, 21 July 2009

New version of preview package has been created. It has a number of bug-fixes and several major features. There you can find the following:

- Scripting support + several examples. However better documentation is needed.
- "Import Graphics" command has been added.
- New Variables view in Designer and Realtime. Perfect for runtime communication debugging.
- Binding possibility from property grid was removed.
- Added: ColorEditor, undo/redo functionality with supporting changes from property grid.
- Adding more examples for scripting feature.
- Support for dynamically loaded visual plugins.
- Color binding is implemented as part of common binding editing dialog.
- A lot of bugfixes for every FreeSCADA module.

Version 2.0.0.7 (preview) is here

PS. Don't forget to uninstall earlier version before proceed with the new install.
